Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
[Presentation Layer]	User interface that serves as the entry point for all end-users. Handles rendering, user input, and making API requests.	React.js, Tailwind CSS, Redux, Nginx.
[API Gateway]	Single entry point for all client traffic. Routes requests to appropriate microservices, handles authentication, and rate limiting.	AWS API Gateway, Spring Cloud Gateway, JWT.
[Microservices]	Independently deployable and scalable services, such as Auth Service, User Profile Service, Order Processing Service, and Product Processing Service, and Product Catalog Service.	Spring Boot, Node.js, Kubernetes, Docker, RabbitMQ.
[Database]	Persistent data storage for the microservices, structured into specific databases based on the service's needs.	PostgreSQL (User/Order info), MongoDB (Product catalogs), Redis (Caching).
